Great, thanks Gary.
We may also want to get the Galveston Corps of Engineers involved with some of the oversight and other field work. CAS

OK – will do.

For followup/review, I plan to discuss with COE today about having them do an assessment/report on repaired area, including issues in the Harris County letter. May need some more \$ for them, and do not want to slow down their current work. Expect PRP field report early next week & sediment sample results by end of February. Will ask for COE report by end of February (not wait on sampling results). If any dioxin release found, will direct PRPs to sample nature/extent & take repair actions if needed as per OMM plan.

Plan to get draft response to Harris County to you today.

Regards,

Gary Miller

Importance: High

Gary,
Another San Jacinto letters.
The cover letter that we just prepared covers some of the issues raise in this Harris County request. We will need to outline what follow up oversight/review will be conducted.
Also, in EPA's response, we need to upfront clearly state that this incident was not a cap failure and neither were the previous rock displacement events.
We fully agree with Harris County that the Time Critical Removal work was a temporary fix and it has severed the purpose of preventing releases. CAS
